SOFTWARE FEATURES

Orthodontic Simulation

Generate Al-based simulations to facilitate communication between doctors and patients.

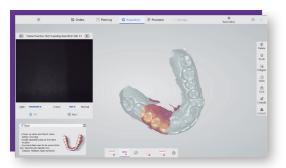

Undercut

Allow you to analyze the undercut area based on insertion direction.

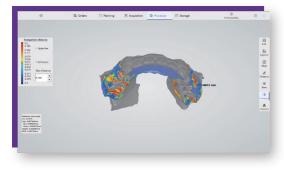

Margin

Create a margin line and edit it into accurate positions around the preparation.

Pre-preparation Scan

Add a pre-preparation scan to an order if you want to pass on more information to the lab.

Treatment Monitoring

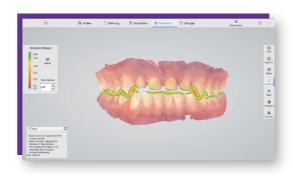

Compare model differences throughout the orthodontic treatment for diagnostic analysis.

Cuff Tool

Clear cuff data avoids tissue interference and enables automatic locking, significantly improving data reliability.

Lock Area

Select an area to lock before performing additional scans. Original scan data of the selected area can be used for the final output.

Color Switch

Switch colors with a single-click. Display true color of the jaws to restore clear details.

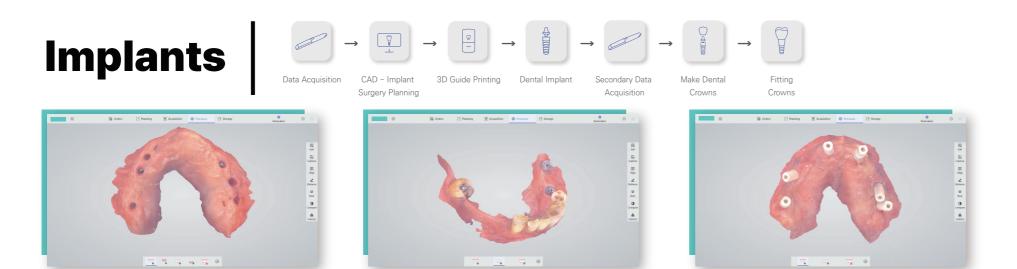

Al Scan

Easily identify soft and hard tissues, eliminate redundant data, and create accurate dental models.

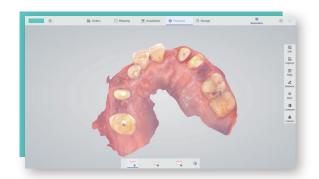

Occlusal Distance

Automatic occlusion analysis with a color heat map to indicate occlusal interferences between the upper and lower jaw, allowing for accurate judgment of restoration distance and assisting in improving the effect of tooth preparation.
